SPEARMC IS NOW MYTHICS

Configuration over Customization Framework

Developed for PeopleSoft Administrators or Developers with basic PeopleSoft knowledge, IT Staff transitioning to OCI without prior cloud experience, and Technical Managers overseeing PeopleSoft implementations.

This two-day, hands-on live-virtual course introduces PeopleSoft practitioners to deploying and managing PeopleSoft environments in Oracle Cloud Infrastructure (OCI) using PeopleSoft Cloud Manager. No prior OCI experience is required – participants begin with the fundamentals of cloud computing and then proceed to install, configure, and automate PeopleSoft lifecycle operations through Cloud Manager. By the end of the course, attendees will understand how to provision and patch environments, optimize performance, enhance security, and troubleshoot common issues. Ideal for those with a basic grasp of PeopleSoft architecture, this training ensures a smooth transition to efficient, cost-effective PeopleSoft operations on OCI.

Prerequisites:

- Basic understanding of PeopleSoft architecture
- General familiarity with IT infrastructure concepts
- No prior OCI or cloud experience required

Grasp Fundamental Cloud & OCI Concepts

- Understand basic cloud computing principles and how Oracle Cloud Infrastructure (OCI) is structured.
- Navigate OCI's core services (Compute, Storage, Networking) and console interface.

Review and Connect PeopleSoft Architecture to OCI

- Recap key PeopleSoft components and how they fit into a cloud deployment.
- Understand how Cloud Manager mediates between PeopleSoft and OCI resources.

Install and Configure Cloud Manager

- Set up prerequisite OCI resources (compartments, VCNs, IAM).
- Install and perform the initial configuration of PeopleSoft Cloud Manager.

Provision, Manage, and Maintain PeopleSoft Environments

- Create, clone, patch, and scale PeopleSoft environments on OCI.
- Automate lifecycle operations using Cloud Manager's tools and best practices.

Apply Security, Optimization, and Troubleshooting Techniques

- Utilize OCI security features and best practices for PeopleSoft environments.
- Monitor system performance, troubleshoot common issues, and manage costs.
